Demo 2

For ****ment from US

1. There is no need to enter the operating system repair interface if the system files didn't damaged after POS machine abnormal shut down (power-off)
2. The files in operating system disk come with power-off protection, whether write protection is decided by customization or not
3. After turn on the machine, the boot image (without any Windows marks)will be showed until entered in a specified software.
4. Custom disable all the hotkey, shortcut, and combination keys, bring up task manager or resource manager by some means that can be restricted
5. Prohibit the computer from hibernating and the screen off; Always working in the highest performance mode
6. Set the UAC to never
7. System will be activated automatically after the Ghost installed on every POS machine with the same configuration.
8. Disable the sound of boot and Shutdown
9. The other unnecessary peripherals (such as a printer) can be removed to ensure that reduce the CPU resource occupation and make the system cleaner
10. Turn off the system updating, hope there didn't exist any bugs.
11. The operating system image includes drivers
